KRATER offers a hassle-free installation process, as it comes pre-installed with the blind and insect screen in a single box. This eliminates costly measurements and multi-phase installation since the dimensions are determined at the same time as the windows. Its modern and compact design allows for concealed or visible mounting, making facade application easy. You can also choose from various control options, such as manual with a crank handle, motorized, or remote control.

KRATER[®]
VENETIAN BLIND

- » Cost savings on measurement expenses
- » Numerous color and design combinations
- » Concealed (completely hidden) or visible installation
- » Easy facade treatment of reveals
- » Possibility of installing an integrated roller mosquito net
- » Multiple operating options, including remote control
- » Affordability

KRPAN external blinds are blinds with a standard execution system. The blind set consists of standard slats, a mechanism, traditional brackets and guides, and a visible cover. They are suitable for both new construction and the renovation of older buildings. The installation of these blinds does not need to be planned in advance, as they can be installed after the facade is completed. KRPAN blinds, together with the facade and building furnishings, further enhance the exterior appearance of the building in various color combinations.
